ABOUT

ARISE

Your lives and safety, our number one priority

ARISE is a forward-thinking technology startup dedicated to creating smarter and safer aquatic environments through innovation. We design and develop intelligent solutions that combine the Internet of Things (IoT), artificial intelligence, and real-time monitoring to help prevent drowning incidents and enhance water safety in recreational facilities.

- SAFETY FIRST
- INNOVATION DRIVEN
- PEOPLE FOCUSED
- SUSTAINABLE SOLUTIONS

OUR PRODUCT

ARISE AquaGuard

AquaGuard is an **IoT-enabled wearable arm device** and **AI-powered camera system** designed to help prevent drowning incidents at **water resorts**. It continuously monitors swimmers and sends real-time alerts to the monitoring team for a faster and safer response.

- MONITOR
- DETECT
- PROTECT

HOW AQUAGUARD WORKS

1. **WEAR THE ARMBAND**
   Guests are given an AquaGuard arm device before entering the pool. It continuously monitors movement, water condition, and vital signs.
2. **DETECT POTENTIAL DANGER**
   The arm device and AI camera analyzes the swimmer's condition. If an abnormal situation is detected, it sends an alert to the monitoring dashboard.
3. **SEND ALERT**
   The alert is sent to the online monitoring system with the guest's information (arm device) and/or the location of the pool (AI Camera) with their alert level (Minor, Major, Critical)
4. **AUTOMATIC BUOYANCY**
   If the situation reaches the critical threshold, the CO_2 airbag automatically deploys to provide buoyancy and help the swimmer stay afloat.

KEY FEATURES

Vital Sign Monitoring
Tracks heart rate and SpO_2 to detect unusual changes.

Motion and Water Detection
Identifies abnormal movement and confirms water immersion.

Automatic CO_2 Airbag
Deploys during critical situations to provide buoyancy.

AI-Powered Cameras
Detects potential drowning activities in real time and provides local warning sound to alert on-site operators.

Centralized Monitoring
Alerts from the arm device and AI cameras are logged in the online monitoring system.

IDEAL FOR

- Waterpark Resorts
- Swimming Pools
- Hotels & Resorts
- Recreational Facilities

AquaGuard

AquaGuard is an **IoT-enabled wearable arm device** and **AI-powered camera system** designed to help prevent drowning incidents at **water resorts**. It continuously monitors swimmers and sends real-time alerts to the monitoring team for a faster and safer response.

HOW AQUAGUARD WORKS

1 WEARABLE ARM DEVICE

Continuously monitors the swimmer's movement, water condition, and vital signs.

- **Motion Sensor** (detects unusual immobility)
- **Water Sensor** (confirms water immersion)
- **Heart Rate & SpO2** (monitors vital signs)

If a critical situation is detected, the airbag automatically deploys to provide buoyancy, helping the swimmer stay afloat.

2 AI-POWERED CAMERA

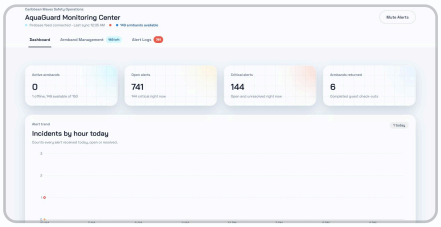

CCTV camera with AI detect potential drowning activities in real time.

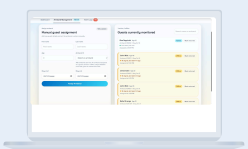

3 MONITORING DASHBOARD

Alerts from the arm device and AI camera are sent to the online monitoring system with guest details.

HOW TO USE

1 STAFF ASSIGN

A resort staff will assign an arm device to the customer.

2 WEAR THE ARM DEVICE

The swimmer will wear the arm device.

3 ENJOY THE WATER

Swim and enjoy while AquaGuard continuously monitors your safety.

4 STAY PROTECTED

If an abnormal situation is detected, alerts are sent to the monitoring team, and the airbag deploys if needed.

REAL-TIME SAFETY MONITORING

FASTER RESPONSE TIME

CENTRALIZED MONITORING SYSTEM

A SAFER AND MORE ENJOYABLE WATER PARK EXPERIENCE
